DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 1, 2, 5-7, 9-12, 15-17, 19-22, 25-27, 29, 30 are rejected under 35 U.S.C. 102(a) as being anticipated by Yue et al. (USPN 6,509,779).

Regarding to claims 1, 10, 11, 20, 21, 30, Yue et al. disclose a method and an apparatus (see figures 3 and 4) comprises an inductor (110) having an impedance connected in series between an output of a high frequency circuit (20) operating at a frequency and an ESD circuit (40) configured to protect the high frequency circuit from an ESD event, the impedance having substantially high value at that frequency and a substantially low value at the ESD event).

Regarding to claims 2, 12, 22, Yue et al. disclose the ESD circuit (40) has first and second terminals, the first terminal being connected to one end on the inductor (110), and the second terminal being connected to ground (shown in fig. 3).

Regarding to claims 5, 6, 15, 16, 25, 26, Yue et al. disclose the inductor is connected between a first bond pad (10) of the output and a second bond pad (10a) of the ESD circuit (40) on a package substrate in a package encapsulating the high frequency circuit (20) and the ESD circuit (40) (see fig. 13).

Regarding to claims 9, 19, 29, Yue et al. disclose the high frequency higher than 1 gigahertz (col. 4, lines 24-25).

Regarding to claim 7, 17, 27, Yue et al. disclose the high frequency circuit and ESD circuit are on a silicon die mounted on the package substrate (see abstract).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3, 4, 13, 14, 23, 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yue et al. in view of Kleveland et al. (USPN 5,969,929). Yue et al. do not disclose the ESD circuit is a gate grounded NMOS and a diode. Kleveland et al. disclose an ESD circuit being a gate grounded NMOS (such as 330 shown in fig. 3B) and an ESD circuit being a diode (116 shown in fig. 1). It would have been obvious to one having skill in the art to modify the ESD circuit of Yue et al. with a GGNMOS and a diode as taught by Kleveland et al. in order to protect ESD event (col. 5, lines 49-53).

3. Claims 8, 18, 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yue et al. in view of Chiu (USPN 6,414,849). Yue et al. do not disclose the package is flip-chip BGA package. Chiu discloses the package is flip-chip BGA package (col. 5, line 35). It would have been obvious to one having skill in the art to modify the integrated circuit circuit of Yue et al. with a flip-chip BGA package as taught by Chiu in order to reduce stress in the IC circuit (Chiu, col. 5, lines 48-51).
